

DisplayShelf for PSVita Console

(IN DAD'S MOST ANGRY VOICE)

DO NOT CLEAN ANY ACRYLIC WITH RUBBING ALCOHOL. IT WILL CAUSE FRACTURES IN THE PLASTIC AND IT WILL CRACK.

PROTECTIVE FILM NOTICE

Before you assemble your stand, you will need to remove this super annoying protective film from each piece. We would have rather done this for you, and we did try – but no matter what we did, we could not keep our greasy fingerprints off of the plastic. **We did include a small removal tool. You can use this to peel away the protective film.**

ASSEMBLY

Be careful when assembling the stand. Acrylic cracks pretty easily, and one rough push could be a devastating one, so take your time. **See reverse side of this page.**

1. Place the largest piece on a flat surface (base).
2. Insert the two stabilizer pieces into the slots at the front of the base.
3. Decide on the positioning for your console. Placing the last large stabilizer inside of the slots closest to the back of the base will display your console with a pivot. Using the slots closest to the front of the base will display your console with less pivot.
4. Place your console on the base between the two sets of stabilizers.

That should do it! If it didn't go the way you hoped, please let me know! Contact me via the platform you purchased, or nick@gameshelf.games.

If you're unhappy for whatever reason, please give me a chance to correct your experience – contact me first! I will make it right.
